

**GLOBAL GEO SERVICES ASA AND ROCK SOLID IMAGES ANNOUNCE JOINT MARKETING  
AGREEMENT FOR WELL-BASED ROCK PHYSICS AND SEISMIC MODEL STUDIES.**

**FOR IMMEDIATE RELEASE: March 28th, 2006.**

**Houston and Oslo, March 2006** - Global Geo Services and Rock Solid Images announced today that they have entered into a multi-year agreement under which Rock Solid Images will develop multi-well rock-physics and seismic model studies to be marketed by Global Geophysical Services in conjunction with their regional seismic programs.

Stated Richard Cooper, President of Rock Solid Images "The move from qualitative to quantitative seismic interpretation methods, such as Impedance and AVO analysis, is fueling a rapid increase in demand for high quality well-based calibration data. By providing integrated seismic and well-data studies, our customers will benefit from a significant reduction in cycle time and improved risk assessment decisions."

Added Trond Christofferson, CEO of Global Geo Services "This new agreement with Rock Solid Images builds upon our existing successful relationship developed through marketing the East Timor/JPDA regional well and seismic study. A significant number of additional integrated programs are currently under development including West Florida, GOM and East Java, Indonesia."

**Global Geo Services ASA (GGS)** is a public company listed on the Norwegian Stock Exchange. The GGS core business is producing 2D and 3D non-exclusive seismic data on a worldwide basis. GGS also develops non-exclusive programs and provides seismic services at multiple centers around the world through its wholly owned subsidiary Spectrum Energy and Information Technology Ltd.

**Rock Solid Images** provides solutions for seismic reservoir characterization, and specializes in the integration of surface seismic and borehole data to build seismic-scale models of reservoir properties such as porosity and fluid saturation. In addition to providing turn-key seismic reservoir studies, Rock Solid Images develops software for rock-physics and seismic modeling and seismic attribute calculation and classification via industry funded consortia.
